**FOR IMMEDIATE RELEASE**

## **TapestryHealth™ and Rosie® Join Forces to Create Groundbreaking New Vitals Management Tool in Long-Term Care**

***The industry's leading providers of primary care telemedicine and connected medical equipment have teamed up to change the way SNFs care for their residents.***

[Stratford, CT, Feb. 18, 2021 --] TapestryHealth, a primary care physician practice and nationwide leader in telemedicine services to the nursing home industry, has announced a partnership with Rosie that will dramatically elevate the level of care that skilled nursing facilities (SNFs) will be able to provide.

“TapestryHealth recently began using the Rosie connected nursing carts for vital signs management at no charge to our clients, while also using the platform for telemedicine services at point-of-care in order to provide an even higher level of care and monitoring capability,” says Dr. David Chess, founder of of TapestryHealth. “That integrated tool has allowed our clinicians to remotely spot and quickly address any changes in a resident’s condition that might indicate a potential health problem.”

TapestryHealth provides on-site and remote care in skilled nursing facilities nationwide, while Rosie has been providing medical equipment and innovative digital solutions in the same industry for more than 40 years. The RosieCare™ EHR connectivity platform is used to monitor and record vital signs in more than 20 percent of all nursing homes in the United States.

TapestryHealth has clinicians available 24/7 to provide evaluation and treatment, face-to-face, at the patient’s bedside. They provide their clients with sophisticated treatment carts featuring digital stethoscopes, integrated otoscopes and hi-definition wound cameras. Rosie provides their clients with advanced, connected digital vital signs monitoring equipment. According to Mordy Eisenberg, TapestryHealth’s COO, that made the decision to work together a simple one.

“We have clinicians who rely on accurate data to provide the best care and to fuel the data analytics aspect of our Vitals Management Program,” Eisenberg says. “Rosie has that accurate data and is already on-site in nearly 20 percent of skilled nursing facilities in America. Working together we can dramatically elevate the level of care provided in these facilities.”

Steve Booker, who founded Rosie with his wife Marie Booker, see the partnership as a transformative force in the long-term care industry.

“Most of the facilities we support have as many as five or six Rosie mobile nursing workstations, and TapestryHealth was able to integrate their vitals management and telemedicine tools right into our existing equipment,” Steve Booker says. “That means our clients can have near instant access to clinical support from Tapestry. We believe that this partnership makes us the most important product on the market for skilled nursing facilities that want to upgrade their level of care. This is going to be the biggest game-changer in skilled nursing care to come along in many, many years.”
